EDUCATION

University of Toronto

Honours Bachelor of Science

Specialist in Computer Science (Software Engineering Stream); Minor in Statistics | GPA: 3.5+

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Machine Learning

Toronto, Ontario

June 2028

WORK EXPERIENCE

Mozilla | Python, Rust, Django, Docker

Full-Stack Software Engineer Intern

September 2025 - August 2026

Toronto, Ontario

- Built a **versioned targeting-context pipeline** that fetched and parsed definitions from Firefox Desktop, Android, and iOS source repositories, enabling Experimenter to validate configurations against platform-specific fields and eliminating a legacy CI test that added **approximately 20 minutes** to affected pull requests.
- Rebuilt the **Nimbus Experiment Results page** with Django and HTMX, replacing legacy JavaScript and reducing measured page-load times by **more than 50%** while adding daily, weekly, and overall metric views.
- Fixed inconsistent enrollment-event telemetry in the **Rust Nimbus SDK**, aligning mobile and desktop reporting behavior and reducing miscategorized experiment alerts by **approximately 30%**.
- Refactored experiment navigation and backend data retrieval, eliminating redundant requests and reducing the number of steps required to access metrics by **40%** across a platform used by **more than 600 internal users**.

Marsatek | Java, Spring Boot, PostgreSQL, React, Docker

Software Developer

February 2025 - April 2025

Remote

- Developed backend functionality for a berth-planning system using Java, Spring Boot, JPA, and PostgreSQL to manage vessel scheduling and operational data, **reducing simulated vessel wait times by 15%**.
- Built **CSV and Excel import/export workflows** with input validation, dynamic repository lookup, and reflection-based data mapping.
- Implemented **3 Spring Boot REST endpoints** connecting the React frontend to PostgreSQL-backed services, with validation, persistence, and structured error handling.

PROJECTS

PaperTrail [🔗](#) | Next.js, Supabase, Python, Gemini API, AWS App Runner, Amazon ECR

October 2025

- Built a Python receipt-ingestion pipeline supporting file and Gmail imports, OCR-based field extraction, duplicate detection, and automated folder classification, achieving **90% field-parsing accuracy** on a manually reviewed test set, with an average processing time of **3 seconds per receipt**.
- Containerized the application with **Docker**, published images to **Amazon ECR**, and configured automated deployments to **AWS App Runner** through a CI/CD workflow.

Temp Tracker [🔗](#) | React, TypeScript, Next.js, Express.js, Supabase, PostgreSQL

June 2025 - August 2025

- Built a React and Express application for importing, storing, and visualizing **10,000+ environmental temperature readings**.
- Developed a **bulk CSV ingestion pipeline** with row-level validation and immediate error reporting, allowing users to upload hundreds of temperature readings in **under 30 seconds**.
- Designed a **data-driven Supabase badge system** supporting **15+ achievement types**, allowing badge criteria to be configured without application-code changes.

TECHNICAL SKILLS

Languages: Python | Rust | Java | JavaScript | TypeScript | SQL

Frameworks: Django | Spring Boot | React | Next.js | Express.js | HTMX

Databases and Cloud: PostgreSQL | Supabase | AWS App Runner | Amazon ECR

Tools and Testing: Docker | Git | GitHub Actions | JUnit | Mockito | Jest
